EXPERIENCE

SYSTEM ENGINEER, TCS

Dec 2023 – Present

- Architected and implemented scalable Node.js/Express back-end microservices and RESTful APIs for a large-scale pharmaceutical application, leveraging **AWS (EC2, ECS, Load Balancing, Lambda)** to improve system reliability, performance, and support rapid growth
- Engineered migration of legacy on-premises systems to AWS cloud infrastructure (**EC2, S3, Lambda**), streamlining infrastructure management and reducing operational overhead by 35%, while boosting scalability and resiliency.
- Led migration of a core application from Heroku to AWS, containerizing services with Docker on AWS ECS/Fargate.
- Developed and optimized Amazon **OpenSearch Service (Elasticsearch)** indices and complex search queries, improving search relevance and query performance to deliver faster, more accurate data retrieval across the application. Pipeline for CI/CD, ensuring seamless deployments and significantly enhancing backend performance.
- Established infrastructure-as-code and monitoring solutions using **AWS CloudFormation**, and **CloudWatch** to automate deployments and ensure 99.9% uptime for critical back-end services, enhancing system observability and stability.

FULL STACK DEVELOPER INTERN , MRIIC

Jan 2023 – June 2023

- As a full stack developer intern at the MRIIC department of Manav Rachna University.
- I delved into cutting-edge technologies such as Django and the MERN stack, and gained a foundational understanding of **Docker and Kubernetes**.
- Played a pivotal role in a project involving API management, development, and integration with cloud databases, among other responsibilities.
- Contributed to the development of landing pages using HTML, CSS, JavaScript, and Bootstrap.

PROJECTS

Chanakya School Website

Link 

Developed a web application utilizing the Django framework.

- Utilized Django, Python, JavaScript, HTML, CSS, and Django models for the development of the application.
- Configured Django Mailer on PythonAnywhere to automate email notifications to the administrator, reducing administrator response time to critical system events by 6 hours and improving system uptime.
- Improved responsiveness using **Bootstrap 5** to ensure a user-friendly experience.

Blood Donation Web Application

Link 

Developed a web application that seamlessly connects donors with individuals in need of blood

- Donors can submit their contact information and blood group.
- The application displays a list of available donors, facilitating direct communication between them and those seeking assistance.
- Technology Stack: Node.js, React, MongoDB, Express, Passport.js (Google Strategy).

Tesla Stock API Data Visualization

Link 

*Developed a data-fetching web application that retrieves financial data from the **Alpha Vantage API**.*

- Visualizes data in interactive graphs utilizing **Google charts**.
- Provides real-time data retrieval for accurate analysis.
- Technology Stack: HTML, CSS, JavaScript, Axios, API integration.

TECHNICAL SKILLS

- , HTML, CSS, Java, JavaScript, AWS, Open Search, NodeJs, Express, React Js, MongoDB

EDUCATION

Manav Rachna International University

Faridabad, Haryana

B.tech CSE

2019 – 2023

- Cumulative GPA : **7.65**

Vidya Mandir Public School

Faridabad, Haryana

PCM

2018 – 2019

- Score : **88%**

CERTIFICATIONS AND PARTICIPATIONS

- Basics of Kubernetes (KODEKLOUD): Link .
- Basics of Docker (KODEKLOUD): Link .
- Learn Figma - UI/UX Design Essential Training : Link .
- Mentored junior participants on Django fundamentals and web application development during the Samsung Django Hackathon in May 2023.
- Performed guitar in music events.
- Represented MRIIRS in table tennis.
